HECO Ascada 2.0

Lise-Meitner-Str. 9 · 50259 Pulheim · Germany · www.heco-audio.de

By the computer, on the shelf or next to the television – the fully active Ascada 2.0 Bluetooth stereo pair from Heco cuts a fine figure everywhere.

Available in black or white gloss finish, the rear-slanted shape of the enclosure benefits not only the appearance but also the sound: If you're sitting right in front of the speakers at the computer, they then emit the sound towards your head rather than chest high. PC use benefits from the front source display and the easily accessible controls for treble, bass and volume as well as a USB input via which the speakers can also easily be plugged in as an external audio device.

If the loudspeakers are not set up within immediate reach, the manufacturer also includes a small remote control with source and volume selection as well as a stand-by button.

Located on the connection side at the rear are cinch sockets, a subwoofer output, one optical and one coaxial input as well as a USB port for charging a smartphone. Inside, the integrated amplifier powers the drivers located in a coated steel cage with an output of 35 watts per channel – absolutely sufficient for a normal large living room.

In terms of sound, the stereo combination is very dynamic and does not sink into a dominant low bass humming or jingling obtrusive trebles. What we are presented with, rather, is a brilliant and spatial stereo stage that knows how to please in terms of richness of detail.
