

HECO

Music Colors 5.1A

- + flexible application
- + dynamic soundtrack reproduction

HECO®

Music Colors 5.1A

This set from Heco promises an uncompromising combination of sound quality and design. We were intrigued...

Configuration

Heco's Music Colors speakers are certainly amongst the prettiest you can buy today. This is down to their compact, gently rounded cabinets and high quality glossy finish.

But the compact beauties conceal much more than a glimpse at the specifications would reveal. Each of the four identical satellite speakers features a two-way system, which consists of a 20 mm fabric dome and 90 mm bass-midrange chassis with long-stroke surround and long fibre paper cone, while the centre speaker is equipped with two bass-midrange drivers. The smooth, narrow down-firing subwoofer is also impressive and it proves a perfect addition to the setup with its 120 watt amplifier and 200 mm bass driver, while its compact dimensions mean it can be accommodated pretty much anywhere in the living room.

Practice/Sound

Heco further enhances its excellent reputation in this test, as its set complements the big screen images of the universal hit "Coraline" with a surprisingly voluminous reproduction. Despite its compact dimensions it is able to produce an amazingly powerful performance and it also generates higher levels without any trace of distortion, while dialogue and details remain clean and precise. When combined with the small sub the set is able to reproduce even lower frequencies properly and it provides the overall sound pattern with a solid bass foundation.

Heco Music Colors Cinema 5.1A

Conclusion

This sextet is clearly intended for the powerful and effect-laden reproduction of multi-channel soundtracks. The flexible options afforded by the system mean it can be installed in a decorative or virtually invisible setup in living rooms measuring up to 24 square metres.
